Roof Rainwater Harvesting, Storage and Use at Household Level

**Step 1: How much water do you use daily?**

		<b>Litres</b>
a) Domestic	For Cooking, drinking washing, bathing etc	<b>A</b>
b) Livestock	For Large livestock & small livestock	
c) Kitchen Garden	For watering	

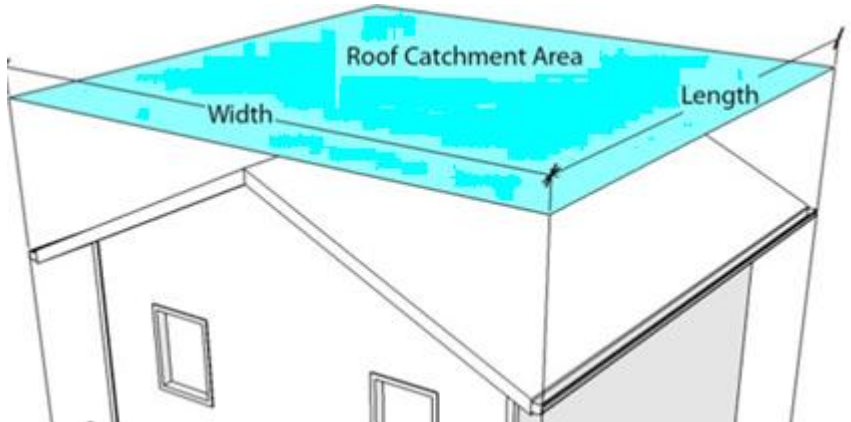

**Step 2: Where do you live (climatic region)?**

<b>Region</b>	<b>Average Rainfall Amount per year</b>	
a) Highlands East & West of Rift valley	1000mm	<b>B</b>
b) Lake Victoria Basin & Western Kenya	1000mm	
c) North Western Kenya	850mm	
d) Northern- Isiolo, Garissa, Kajiado, Machakos, Tana River, Kitui, Mandera, Moyale	500mm	
e) Wajir, Lodwar	250mm	

**Step 3: Calculate your roof (catchment) size**

The size of the roof will determine how much rainwater you can harvest.

Catchment area (m <sup>2</sup> ) = Length of roof (m) X Width of roof (m)	C
---	---

*Annual available harvested rainwater = Roof catchment area X annual rainfall(mm) / 1000*

**Step 4: Calculate your storage size needed**

The storage size will be determined by:

1. Daily household water needs (**A**)
2. Local average rainfall amount (**B**)
3. Roof catchment area (**C**)

<i>Storage size needed = Annual household water needs X Longest average dry period / 365</i>
--
